

PostHog agent platform

"Live" demo

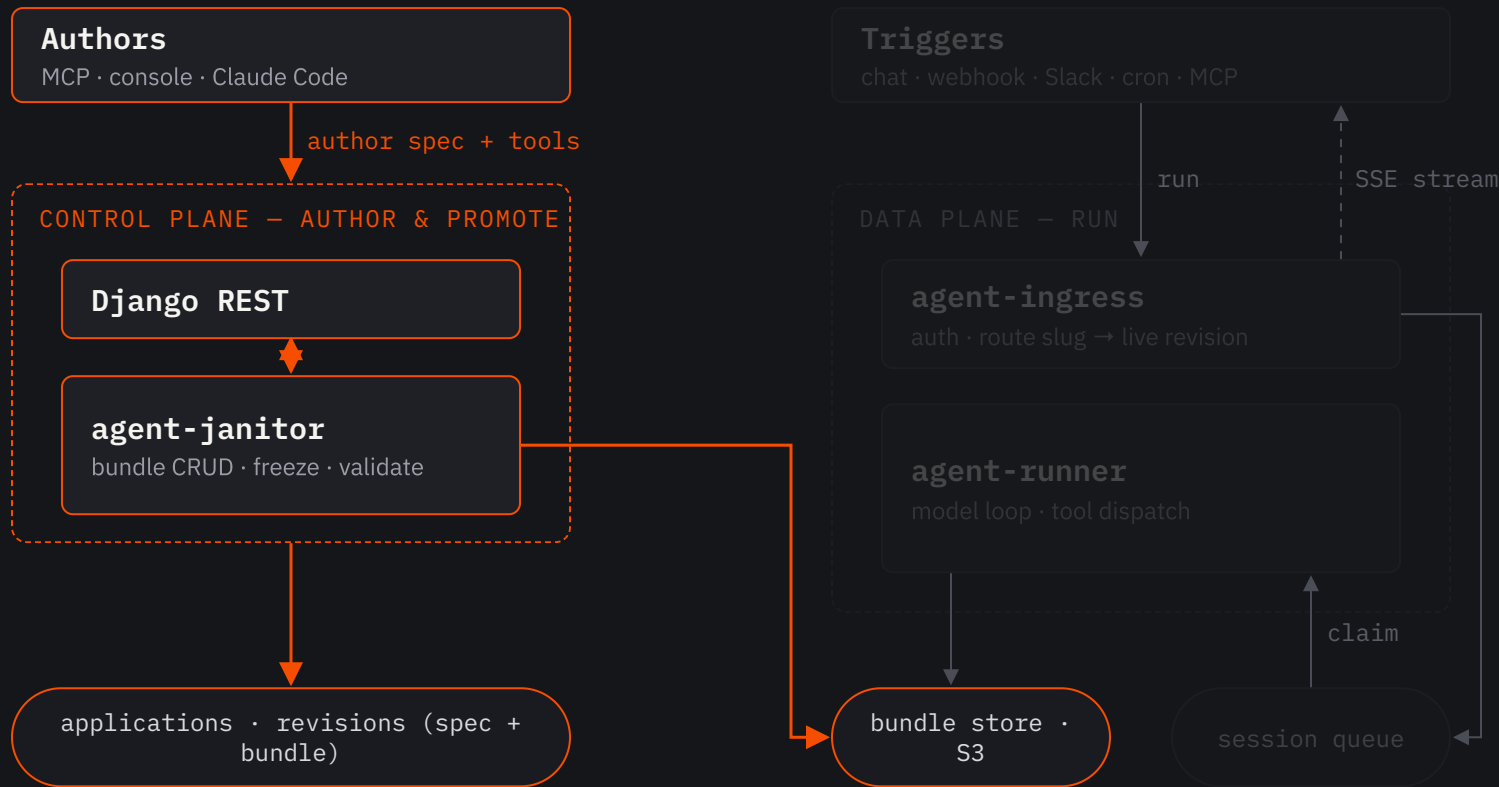

Dylan Martin

AI product engineering lead, PostHog

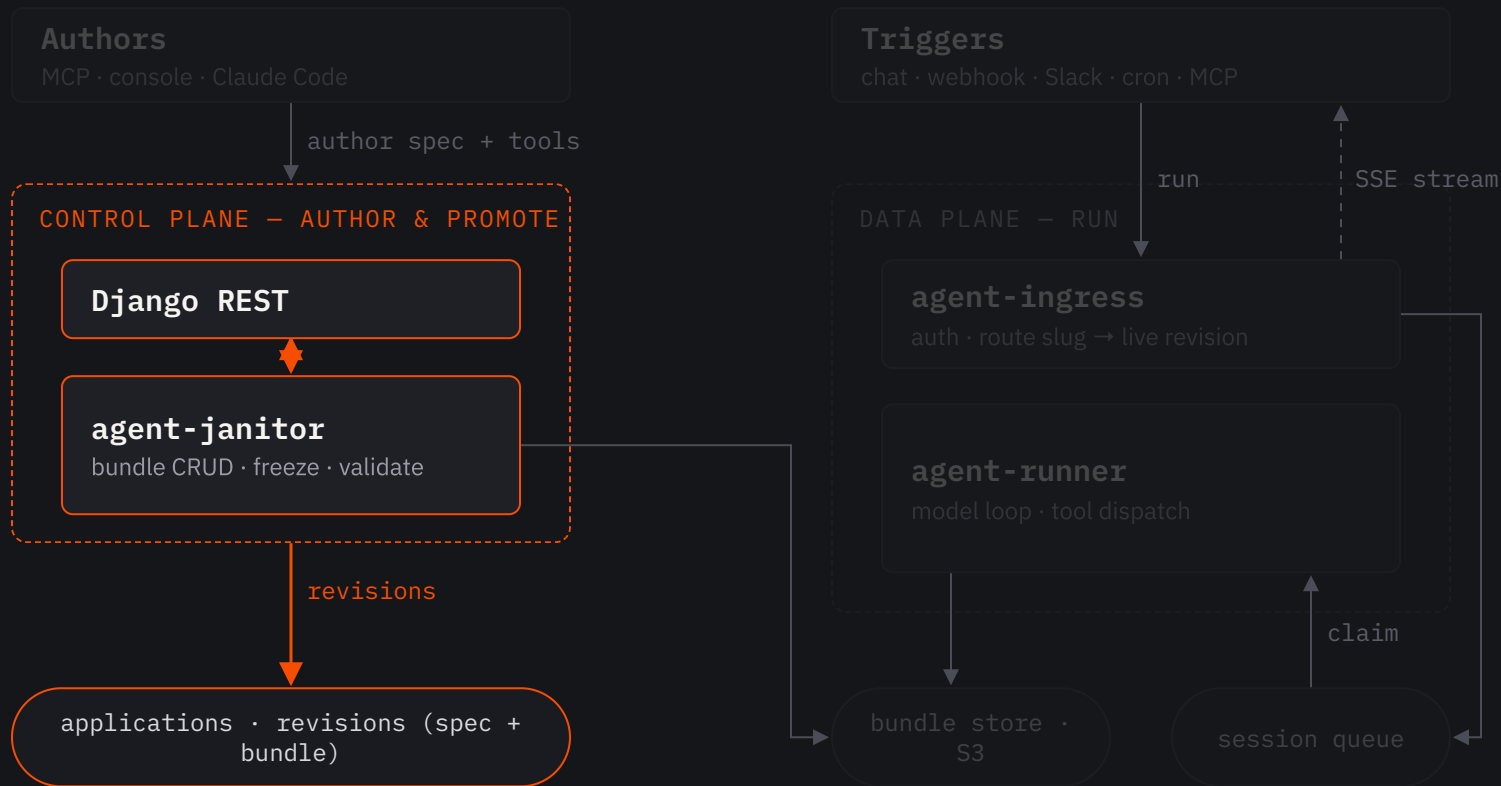

Describe an agent. **Ship it live in minutes.**

› Create and deploy a live agent called `repo-explorer-demo`: an assistant that answers questions about any public GitHub repo's architecture using the DeepWiki remote MCP server (<https://mcp.deepwiki.com/mcp> – public, no auth).

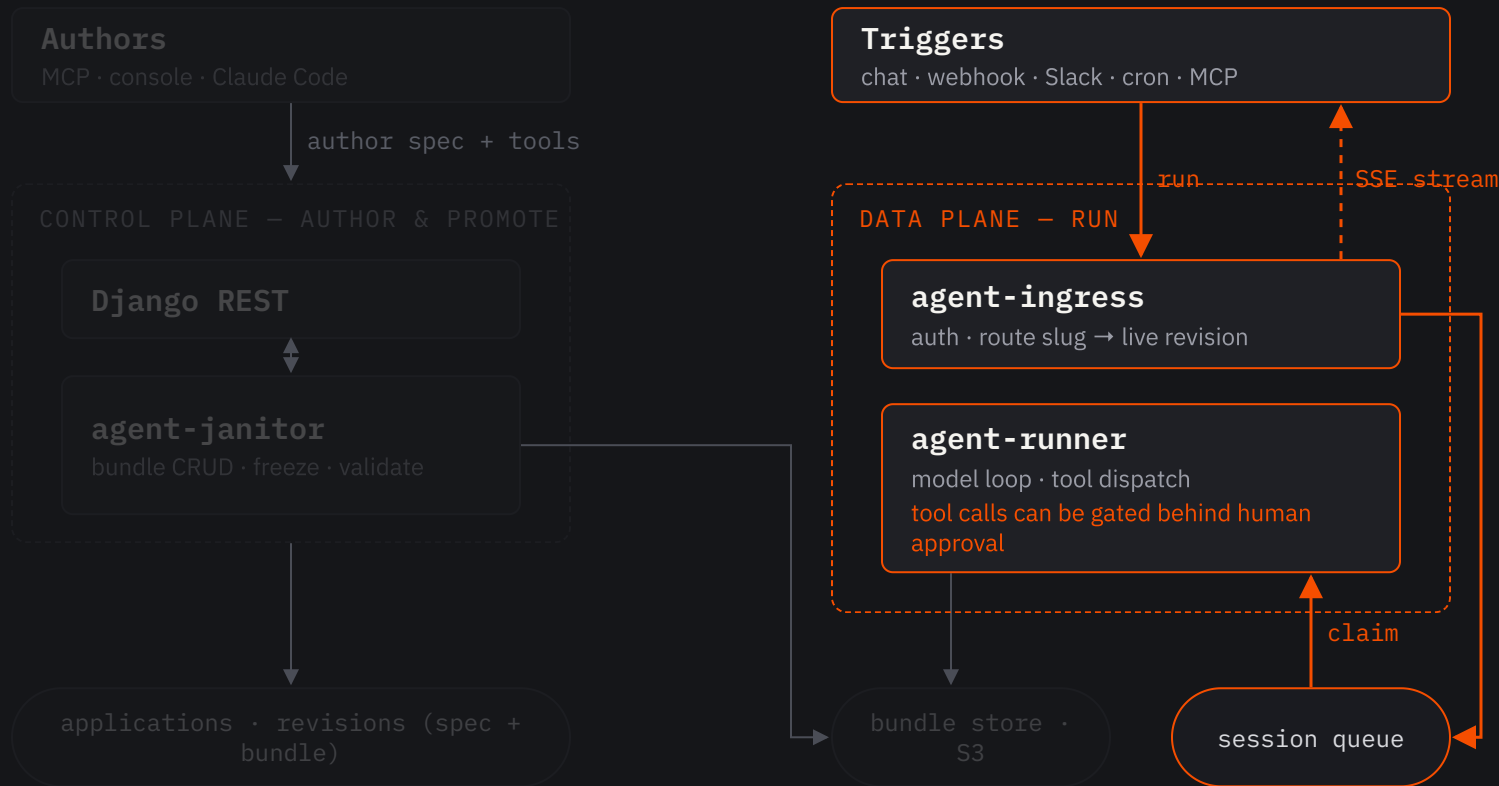

An agent is a versioned spec

draft → freeze → promote

One agent, five front doors

Ask it anything with a repo.

> how does posthog/posthog handle session replay ingestion?

⚙️ deepwiki · ask_question(repo: "posthog/posthog", ...)

live demo →

Spec in. **Agent out.**

Built live from a single prompt

Versioned by default; rolling back is one command

Reachable from chat, Slack, webhooks, cron, and MCP
